Professional Summary

Java/Spring Boot backend developer (B.Tech CS, graduating 2027) who has independently designed and shipped RESTful APIs across two full-stack systems: a concurrency-safe event booking platform and a URL shortener live in production. As a software engineering and QA intern, fixed reported defects with Claude as an AI coding assistant.

Education

Bachelor of Technology (B.Tech) in Computer Science and Engineering **2023 – 2027 (Expected)**
KCC Institute of Technology & Management, AKTU | CGPA: 7.58/10

Skills

Languages: Java, SQL; basic JavaScript, React, HTML, CSS

Frameworks & Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA/Hibernate, RESTful APIs

Databases & Real-Time: PostgreSQL, Redis (Caching), WebSocket (STOMP), Database/Schema Design, Indexing

Security & Concurrency: JWT, Refresh Token Rotation, RBAC, BCrypt, Optimistic & Pessimistic Locking

Testing: JUnit 5, Mockito, MockMvc, Manual & Exploratory Testing

DevOps & Tools: Git, Docker, GitHub Actions (CI/CD), Maven, Postman, Swagger/OpenAPI, Render, Claude Code

Experience

Software Engineering & QA Intern **30 Aug 2026 – 7 Oct 2026**
Compass (HeyCompass) – *AI Travel-Planning Startup*

- Delivered **50 merged commits** addressing **25+ QA-reported defects** with Claude as an AI coding assistant, investigating each defect, reviewing the changes, and validating fixes with tests.
- Helped resolve a race condition that let a **500-request burst** bypass the API rate limit of 10 across 30 routes, using an atomic database update; concurrency tests verified the limit was enforced.
- Contributed API and app improvements, including trip-editing functionality that separates trip access from traveler count, file-upload content validation, and a fix for flight fares multiplied by passenger count.
- Improved AI itinerary behavior by contributing a 25 km distance-validation rule after one day spanned about 130 km, and addressed 3 issues in WhatsApp and Instagram planning workflows.
- Conducted hands-on testing of the AI WhatsApp agent and its Instagram Reel and YouTube link processing, and directed and reviewed AI-assisted Android device testing and QA reporting.

Projects

LinkPulse – URL Shortener Platform | *Java, Spring Boot, PostgreSQL, Docker, GitHub Actions, Render*
GitHub: github.com/kritagya025/URL_SHORTNER-LinkPluse- | Live Demo: linkpulse-frontend.onrender.com

- Developed a 5-endpoint REST URL-shortening API with indexed lookups and DB-enforced collision-safe codes.
- Automated a GitHub Actions CI/CD pipeline that runs tests against a live database before each Render deploy, and containerized it with a 3-stage Docker build and a jlink-pruned, non-root Java runtime.
- Validated with 39 JUnit/Mockito tests (incl. collision handling); shipped a live analytics dashboard with search.

Event Booking System | *Java, Spring Boot, PostgreSQL, Spring Security, WebSocket, React*
GitHub: github.com/kritagya025/Event-Booking-System

- Designed an 83-endpoint Spring Boot RESTful booking platform with seat, payment, and ticketing workflows.
- Implemented pessimistic and optimistic locking against concurrent overbooking, verified by a multithreaded test.
- Secured the platform with JWT authentication, rotating refresh tokens, RBAC, and per-resource ownership checks, backed by a 6-test security regression suite; shipped real-time seat updates over WebSocket/STOMP.
