OBJECTIVE

Motivated Computer Science Engineering student (B.Tech, 2027) seeking an internship or entry-level Java Developer role. Hands-on experience building RESTful APIs with Spring Boot and MongoDB, writing clean object-oriented code, and applying core Java concepts including Collections, Exception Handling, and Multithreading fundamentals. Eager to grow within a collaborative engineering team and contribute to scalable backend systems.

EDUCATION

B.Tech — Computer Science Engineering
KCC Institute of Technology & Management, AKTU, Noida

2023 – Present

TECHNICAL SKILLS

Languages:	Java (Core + OOP), SQL basics, JavaScript, HTML/CSS
Core Java:	Collections Framework, Exception Handling, Streams API, Generics, Multithreading basics
Frameworks:	Spring Boot, Spring Data MongoDB, Spring Validation, Lombok, Maven
Databases:	MongoDB, MySQL, PostgreSQL
Tools:	Git, GitHub, Postman, IntelliJ IDEA, Linux CLI
Concepts:	DSA, OOP, RESTful APIs, MVC Architecture, Bean Validation (JSR-303), SOLID Principles (learning)

PROJECTS

Student Management REST API

Spring Boot · Spring Data MongoDB · Maven · Java 17 · RESTful APIs

- Built a production-style RESTful API with 11 endpoints supporting full CRUD, department/semester filtering, GPA-based queries, and partial student search.
- Implemented global exception handling using `@RestControllerAdvice` with custom exceptions (`StudentNotFoundException`, `DuplicateEmailException`) and structured JSON error responses.
- Applied Bean Validation (JSR-303) annotations (`@NotBlank`, `@Email`, `@Min/@Max`) for server-side request validation, reducing invalid data errors significantly.
- Designed clean layered MVC architecture: Controller → Service → Repository, with custom `@Query` annotations for regex-based MongoDB queries.
- [View project](#)

IdeaForge — AI-Powered Startup Validation Platform

- Developed backend REST endpoints for startup idea submission, feasibility scoring, and community feed interactions.
- Integrated Gemini AI API to generate automated validation reports with structured JSON responses parsed on the frontend.
- Implemented user authentication flow with protected routes and profile management using Spring-based session handling.

Expense Tracker — Personal Finance Manager

- Built backend services for income/expense CRUD operations with real-time balance calculation using Java Streams.
- Designed RESTful endpoints consumed by the frontend for category analytics visualisation and PDF export functionality.
- Wrote unit-test-style manual validations to ensure data integrity across financial records.

Disaster Coordination System — Emergency Management Platform

- Engineered backend APIs for SOS alert broadcasting, disaster reporting, and resource request management.
- Implemented real-time status tracking for recovery dashboards using RESTful polling and MongoDB aggregation queries.

CERTIFICATIONS

Claude Code in Action — Anthropic

Mar 2026

Cert ID: jwyuk7funzq6 | Agentic AI coding workflows, prompt engineering, and multi-step code generation pipelines.

Cyber Job Simulation — Deloitte Australia (Forage)

2024

Cybersecurity fundamentals, risk assessment, and real-world threat analysis in a professional simulation.

ADDITIONAL SKILLS

- Strong analytical and debugging skills — comfortable tracing Java stack traces, understanding `NullPointerExceptions`, and resolving logic errors in Spring Boot applications.
- Consistent practice of Data Structures & Algorithms in Java (arrays, linked lists, recursion, hashmaps) to strengthen problem-solving ability.
- Self-motivated learner exploring Java design patterns (Singleton, Factory) and clean code principles through documentation and side projects.
- Clear communicator — able to explain technical decisions in team settings and document APIs using structured README files.
